Full Stack developer with over 5 years of experience with Frontend development specialty; AWS Cloud/Infrastructure enthusiast. I've collaborated in teams building B2B and B2C solutions and have built my own SaaS, giving me experience in both Engineering and Marketing for reaching customers. I've helped others discover their true passion in Software Engineering and acted as a mentor, sharing experiences, tips and roadmaps to set a clear path on how to begin or continue a career in this field.

Previous experience:

- **Senior Software Engineer at Allied Global (Jun. 2025 - Dec. 2025):** Develop features, test, scale and maintain a mobile application and web portals for a US-based senior-focused company, providing new solutions for internal communication across clients.
  - **Tech stack:** React.js 18+, React Native, Expo, TailwindCSS, TypeScript, Vite, Zustand, PostgreSQL, Aptible, Nest.js, Docker, MikroORM, TypeORM.
  - **Achievements:**
    - Optimize and reduce backend sizes for optimal storage costs.
    - Automate the native application releases to App Store and Play Store, reducing the amount of manual overhead.
    - Design new views for each dashboard and mobile view with a high focus on UX.
- **SSR Full Stack Developer at Gamefort LLC (Feb. 2024 - Aug. 2024):** Contributed to the development of a cutting-edge gamification platform, targeting the South American market with B2B and B2C features, rewards systems, and exceptional user experiences.
  - **Tech stack:** React.js 18+, Next.js 13+, GraphQL, PostgreSQL, AWS, Azure, Docker, Kubernetes, TypeORM, DrizzleORM, Vercel, Fastify, Hono, ArgoCD, Massdriver, Terraform.
  - **Achievements:**
    - Led infrastructure and application stack refactoring, reducing costs and enhancing developer and user performance.
    - Migrated the backend from Fastify to Hono, achieving significant improvements in scalability, performance, and memory efficiency.

- **Full Stack Developer at Whitesoft PTY Ltd (Dec. 2022 - May. 2023):** Developed a Progressive Web Application for food delivery, service management, and reservations, featuring a customizable dashboard for users and administrators across Colombia.
  - **Tech stack**: React.js 17, Redux 4, Git, GitHub, Firebase, Node.js, AWS.
  - **Achievements:** Designed an intuitive user workflow that increased app adoption and revenue by approximately 23%.
- **Freelancer Full Stack Developer (May. 2020 - 2023):** Delivered high-quality web solutions to a diverse client base worldwide, addressing unique client needs and ensuring user satisfaction.
  - **Tech stack**: HTML, CSS, JavaScript, TypeScript, Git, GitHub, React.js 18+, Next.js 14+, Zustand 4+, Redux 5, MySQL, PostgreSQL, Node.js, Hono, Docker, AWS, Vercel, PrismaORM, DrizzleORM.
  - **Achievements:**
    - Built a project tracking application for an engineering and architecture school in Mexico.
    - Transitioned a local store into a fully functional ecommerce platform, improving operational efficiency and accessibility.
    - Building my own AI-driven SaaS and NPM packages.

Projects:

- **PDFizado (sunset):** A SaaS with an average of 50 Monthly Active Users (MAUs) in its active time (2023-2024) dedicated to chat with PDFs, achieving a RAG-like experience allowing users to confidently use AI models to accelerate their workflow when using a PDF.
- **Xochicalli Commerce:** Ecommerce for an on-site Mexican business which decided to begin a transition to the digital era and take advantage of the internet and social media to boost their sales.
- **PanaBarbero (in development):** Barbershop management SaaS for solo and well-established barbershops that need an analytics, booking, notification, reminder and payment system all in one software to serve multiple customers at the same time.
- **Wompi SDK:** Node.js SDK for the Colombian payment processor "Wompi". Allowing Colombian developers to effortlessly integrate payments in their applications built from scratch using any Node.js backend framework.
- **Nequi SDK:** Node.js SDK for the Colombian mobile wallet "Nequi". Allows Colombian developers to interact directly with the Nequi API and perform transactions without the hassle.
